

What is claimed is:

sub
A2 1. A device for autologous blood transfusion comprising:
an autotransfusion set including a separation unit for
concentrating a cell fraction, a tubing system for providing a
connection to a blood supply, and a filter means for
eliminating at least one of leukocytes and tumor cells, the
tubing system including a blood supply line leading to the
separation unit for supplying blood to be processed, and a
return line leading away from the separation unit for
supplying the concentrated cell fraction; and

a centrifuge unit, the separation unit of the
autotransfusion set being rotatably mounted to the centrifuge
unit.

2. The device of claim 1, wherein the filter means is
arranged in the blood supply line of the tubing system.

sub
A3 3. The device of claim 2, wherein the autotransfusion set
includes a blood collecting tank having an inlet and an
outlet, the blood supply line includes a first section
connected to the inlet of the collecting tank and a second
section connected to the outlet of the collecting tank, and
the filter means is arranged in the collecting tank.

sub
C1 4. The device of claim 3 further including means for
supplying an anti-coagulant, the means for supplying an anti-
coagulant being connected to the blood supply line of the
tubing system.

sub
A4 5. An autotransfusion set for a device for autologous blood
transfusion comprising:

a separation unit for concentrating a cell fraction;

Sub
A4
a tubing system including a blood supply line leading to the separation unit for supplying blood to be processed, and a blood return line leading away from the separation unit for supplying the concentrated cell fraction, and

filter means for eliminating at least one of leukocytes and tumor cells.

6. The autotransfusion set of claim 5, wherein the filter means is arranged in the blood supply line of the separation unit.

Sub
A5
7. The autotransfusion set of claim 6, wherein the tubing system includes a blood collecting tank having an inlet and an outlet, the blood supply line includes a first section connected to the inlet of the collecting tank and a second section connected to the outlet of the collecting tank, and the filter means is arranged in the collecting tank.

Sub
C
8. The autotransfusion set of claim 7 further including means for supplying an anti-coagulant, the means for supplying an anti-coagulant being connected to the blood supply line of the tubing system.

Sub
A6
9. A method of autologous blood transfusion comprising the steps of:

collecting a quantity of blood from a patient;
passing the blood through a filter to eliminate at least one of leukocytes and tumor cells;
centrifuging the filtered blood in order to concentrate a cell fraction, and
returning the concentrated cell fraction to the patient.

Sub
C'

10. The method of claim 9 wherein the quantity of blood is treated with an anti-coagulant.
